

Trak · Legal Questions for Discussion

Prepared for meeting with counsel (Greece) · July 2026

1. Context

- **Trak** is a mobile-first web app for developing young football players. Coaches log sessions and assess players; players log matches and daily wellness; parents have read-only visibility. A **character-building feature** for children is in design.
- The data is sensitive by nature: **personal data of minors** (performance ratings, daily mood entries, soon behavioural self-reflections). Hosting/database providers are US-based (Supabase, Lovable).
- A **pilot is planned in Greece — either with a private school or a football academy**.
- **Current status: nothing is formalised**. No legal entity, no terms and conditions, no privacy policy, no signed agreements with the engineer or advisors, no trademark.
- **Goal of this meeting**: what it takes to establish the company, operate legally, and be covered — process, documents, and costs.

2. Creating the company

Discuss: What entity and where — Greek IKE / other Greek form, or another EU option? What fits a software company whose first customers are Greek?

Discuss: The formation process, step by step — documents, notary, tax registry, bank account, timeline. What can be done remotely, and what needs presence or a proxy?

Discuss: Costs — realistic all-in setup cost, and what a small company costs **per year** to run (accountant, filings, social-insurance contributions, any minimum taxes even with little or no revenue).

3. Being covered

Discuss: Terms and conditions + privacy policy — the minimum set before real users. What must they contain given users include children, coaches, and parents — and given the app offers behavioural/character content to minors (we make no therapeutic claims)? English or Greek?

Discuss: Personal liability — until the company exists, everything happens in a personal capacity. What does the entity actually shield, and what remains personal?

4. Children's data (GDPR)

Discuss: What's required to process minors' data lawfully — **parental consent** (from what age can a child consent alone in Greece?), whether mood/behavioural entries count as **special category** data, and any obligations that follow (e.g. DPIA).

Discuss: Coaches can add a child to a roster (name, age) **before** the child or parent has an account — is that lawful, and if not how do we restructure it?

Discuss: Our providers are **US companies** — what needs to be in place for the data of Greek minors?

5. The pilot

Discuss: Does **school vs football academy** change the legal setup? Who is controller vs processor, who collects parental consents, and what must the **pilot agreement** contain at minimum?

6. Intellectual property

Discuss: Our understanding is that an app **idea cannot be patented** in Europe (software/business methods are excluded) — correct? If so, what is the **strongest realistic protection**: trademark, copyright, contracts?

Discuss: Trademark "Trak" — Greek vs EU registration, cost, and urgency.

Discuss: IP assignments — code is written with help from a software engineer and a psychologist advises on content; nothing is signed. What must be signed so all IP belongs to the company, and can past work be assigned retroactively?

7. Priorities to settle in the meeting

1. **What entity, where, and what does it cost** — setup and per year?
2. The **formation process**, and what can be done remotely?
3. The **minimum protection package** (T&Cs, privacy policy) before real users?
4. Is our **children's-data model** lawful as designed, and what must change?
5. **Trademark + IP assignments** — what to sign now, and can it cover past work?
6. Which documents are **must-haves before the pilot**, their cost, and timeline?

8. The ask

A prioritised path — do now vs later, with rough total cost — and whether they can handle the formation and drafting, on what fee basis.
