

Task list

Tactical and knowledge work. None of these require strategic decisions — where a judgement call comes up, flag it rather than deciding.

Start with these three

	Task	Why first
A1	Verify the five untested features	Could shrink the whole backlog for free
C1	Competitor and pricing teardown	Feeds the pricing decision without making it
B2	Character scenario drafts	Long lead time; needed before the psychologist review

A. QA and verification

	Task	Deliverable	Effort
A1	Log in as each role and exercise the five features never tested against a live database: coach recognition/awards, coach schedule, coach AI assistant, athlete passport, club radar	Table: feature • works / broken / empty • what you saw • steps to reproduce	1 day
A2	Full cross-role run: create coach → add player → assess → log a match → link a parent → confirm all three roles see the right data	Bug log with screenshots	1 day
A3	Device check — the app is a 430px mobile shell. Test on real iOS and Android phones, and narrow screens	List of layout breaks by device	Half day

Context for A1: a parent-facing feature recently looked like it had never been built. It turned out the screens were finished and one database permission was missing, so it silently showed nothing. These five features are in exactly that unverified state — any could hold the same fault. Read "empty" as suspicious, not as "no data yet."

B. Content authoring

	Task	Deliverable	Effort
B1	Coach knowledge base — training sessions and drills, grouped by the two phases matching Trak's age groups (U13–U16, U17–U19+)	Per session: name • objective • setup • duration • coaching points	Ongoing
B2	Character scenarios — situational dilemmas for each of the six values (Composure, Respect, Effort, Teamwork, Responsibility, Sportsmanship), each with A/B/C options and a target answer	~10 scenarios per value. Drafts only — a sports psychologist validates later	1 week
B3	Flashcards — short, kid-facing "what does this value look like on the pitch?" cards	5–10 per value	2 days
B4	Expand the in-app coach manual, which is currently thin	Onboarding guidance a new coach could follow unaided	2 days

C. Research

	Task	Deliverable	Effort
C1	Competitor teardown — Spond, TeamSnap, Coachbetter, Playermaker, Hudl, Veo, MatchTrackr	Comparison table: features • pricing • who pays (club, coach, parent)	2 days
C2	Youth curriculum standards — how the FA, UEFA and the Greek federation structure age-group development and coaching badges	Summary of what is expected at each phase	2 days
C3	Existing TPSR and ROOTS implementations in youth sport — who runs them, what materials exist, what evidence is published	Annotated source list	2 days
C4	Greek market map — private schools and football academies that could host a pilot	List: name • size • contact • any tech already in use	3 days

D. Operational prep

	Task	Deliverable	Effort
	D: Seed realistic demo data — believable squad, positions, assessments, match history	A demo account that can be shown to a school or academy without embarrassment	1 day
	D: Lawyer meeting prep — gather provider terms (Supabase, Lovable), a list of what data Trak stores per table, and any informal agreements already in place	Single folder of documents	1 day
	D: Asset inventory — where the logo, fonts and brand assets live, and who owns them	Inventory with ownership noted. Needed for the trademark question	Half day

Working notes

- **Flag, don't decide.** Anything touching pricing, the value set, or product direction comes back rather than being settled.
- **Evidence over opinion.** For QA work, always include what you saw and how to reproduce it.
- **Content is draft until validated.** Character material is reviewed by a sports psychologist before it ships; write freely, nothing is final.
